

Data Movement (including data collection and transformation) among disparate platforms and databases is one of the most pervasive efforts in today's dynamically changing and increasingly heterogeneous IS environments. The associated effort is an arduous and ongoing, resource-intensive, often-underestimated endeavor.

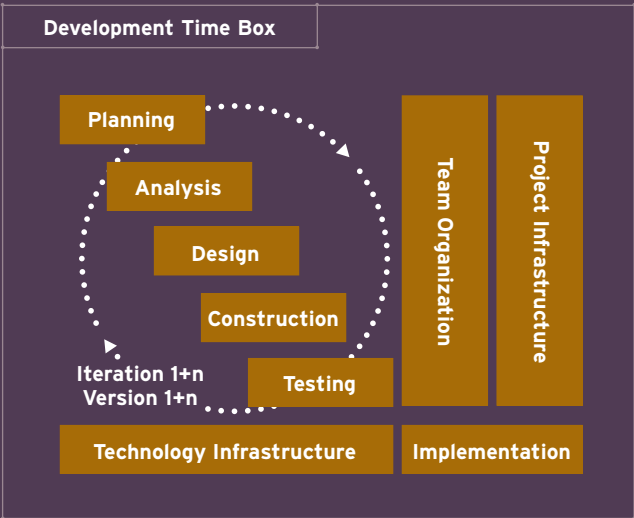

Daman Consulting can help reduce the associated risk as well as manage the "pain" of these efforts. Our team of highly committed and skilled professional consultants will leverage advanced automation tools, our expertise, our experience, and a proven methodology to deliver a solution on-time and within budget while minimizing the impact

on your business operations. **☒** We can promise to do so because we specialize in developing and deploying large-scale data movement solutions to support initiatives by large corporations such as:

- **Application Implementations and Migrations**
- **Building and Maintaining Data Warehouses**
- **Intelligent Information Access and Delivery**
- **Enterprise Data Integration/ Movement efforts triggered by Mergers and Acquisitions and other business imperatives**

Our proven methodology minimizes risk. Daman Consulting's data movement methodology is the result of a wealth of experience across industries and data movement contexts. It is a complete "end-to-end"

methodology that addresses all components of the data movement exercise including initial assessments, planning, solution design, development and deployment as well as ongoing support and maintenance. ■ A critical feature of the methodology, particularly with reference to solution design and development is that it incorporates the best principles of incremental, iterative, yet deliverable-driven application development. A key component is 'Time-boxing', a feature critical in managing the problem of 'scope creep', one of the most challenging components of data movement efforts. ■ Importantly, it is also complementary to other project methodologies and is flexible enough to accommodate the many contexts within which it needs to be applied. Additionally, our methodology recommends active customer participation to ensure thorough knowledge transfer.

	<p>Data Movement Process</p> <ul style="list-style-type: none"> • Situational Assessment • Recommendations & Approach • Tools Selection • Project Plan • Analysis • Design Process • Develop test plan and cases • Build • Unit and Integration testing • Deployment • Post-deployment maintenance

Our use of advanced technologies and tools reduces total time and cost of delivery. The data movement process using traditional approaches (where you would hand-code data movement programs), can be very time consuming taking an estimated 30-85% of total project implementation time! ☒ It is in this area of actually writing, testing, modifying and maintaining the movement programs that Daman Consulting will significantly reduce implementation time and save costs by employing tools that automate the data movement process. More importantly, by doing so Daman Consulting can allow you to adapt your environment to new applications, information strategies or operational systems in a highly cost-effective manner. ☒ An important part of our services is helping you select from a suite of third-party and/or internally developed tools, the tool most suited to meet your conversion needs. Daman Consulting then brings its experience to bear on leveraging your investment in these tools by a truly skillful implementation.

Some examples of data movement tools used by Daman Consulting include:

- **For batch data movement solutions for "many-to-many database" contexts... ETI-EXTRACT®, Informatica PowerMart™ Suite, VMark DataStage.**
- **For exchanging data among applications on different operating systems... IBM MQSeries**

Daman Consulting's solutions add value...

- **Reduce deployment time and cost by up to 70%.**
- **Complete projects in progress with greater speed and accuracy.**
- **Free up resources to focus on other critical projects.**
- **Deploy a strategic or tactical solution.**
- **Develop a data movement architecture and infrastructure.**

Our expertise and experience ensure your success.

Daman Consulting has expertise and experience across industries and technologies that allow us to deliver strategic and/or tactical data movement solutions for the enterprise. Our close association with leading data movement technology vendors ensures that we have substantial experience with installing, configuring and effectively using those products.

The Best Partner in assisting you with your data movement needs. Daman Consulting's experience and expertise, powerful technology, and tools, and proven methodology, can help you with quickly and accurately developing solutions that can be effectively and easily maintained. ■ Let Daman Consulting work with you. Whether you are in the planning stages or in midstream, we can help you get it done faster, more accurately, and at less expense.
